Wolfurt, March 26, 2025

The Doppelmayr Group at INTERALPIN 2025

At the 25th edition of the INTERALPIN trade show in Innsbruck from May 6 to 9, 2025, the Doppelmayr Group will once again be showcasing its latest innovations. The ropeway experts are presenting many further developments from a wide range of disciplines. Visitors can look forward to information on AURO, ESFOR, Connect and the latest digital services in the area of customer support as well as clair. Custom cabin fittings from highlight projects round off the experience on the exhibition stand.

Comfortable: Cabin experiences

Visitors to the Doppelmayr Group stand at INTERALPIN 2025 will be given a unique foretaste of some of the latest ropeway highlights. They will be able to take a seat in the STELLA from Hoch-Ybrig (CHE) or discover the exceptional fittings of the urban OMEGA V-10 XL, which will soon be part of the public transport network in the Paris metropolitan area (FRA). The ATRIA cabin for Canazei (ITA) is set to attract everybody's attention, and a touch of world record can be experienced in the cabin belonging to Schilthornbahn AG (CHE).

Integrated: Connect Cabin

With Connect, Doppelmayr has created the technical basis for a connected ropeway system that enables the integrated control of numerous functions. In addition to the line and the stations, a major focus is naturally on the cabin. This is where Connect Cabin comes into its own. Functions such as communications, lighting, ventilation, and infotainment features offer a host of customization options aimed at creating top comfort, efficiency and safety for the operating company. Visitors to the Doppelmayr stand will have the opportunity to be inspired by the range of different configurations.

Autonomous: AURO success concept

With AURO (Autonomous Ropeway Operation), the autonomous operating system for ropeways, the Doppelmayr Group launched an industry milestone onto the market. More and more customers are opting for this visionary technology. The experience gained from numerous projects feeds into the system's continuous development.

Energy-efficient: ESFOR

ESFOR (Energy Storage System For Ropeways) enables the better use of self-generated electricity and therefore reduces dependence on power from the grid. The recuperation, intermediate storage and subsequent reuse of braking energy makes it possible to increase the efficiency of the system as a whole. At the same time, ESFOR optimizes the power consumption of the ropeway and enables an emergency drive concept without diesel generator. Visitors to the Doppelmayr Group stand can explore the possibilities the system has to offer with the aid of function simulations.

Customer-oriented: Next-level service

With increased transparency and efficiency as well as enhanced communication with the customer support team, the redesigned Doppelmayr customer portal marks a milestone in collaboration. The area of customer training has also seen a host of new developments. Doppelmayr digital training makes ropeway know-how available any time, any place – simple, efficient and up to the minute.

Operation and maintenance: clair resort management

As a digital assistant, clair provides support for operation and maintenance management in a resort. This platform solution brings together the infrastructure of a resort in one place and gives operating companies the tools for boosting the reliability and availability of their installations. Insights and an outlook on how clair makes planning the next inspection period a whole lot more convenient awaits visitors to the Doppelmayr Group stand.

New features: The Connect control system

Connect is the reliable control system from the Doppelmayr Group. It offers many functional benefits and focuses on the needs of users with its intuitive and clearly laid out user interface for operating the ropeway. With a harmonized operating concept across the entire product range, the control system experts are also presenting new functions that enable efficient and sustainable ropeway operations.

Summer operation: Bike transport

The Doppelmayr Bike Cab, the most elegant way to transport bicycles on a gondola lift, will be making its debut on the trade fair stand. Up to eight bikes can be carried in one Bike Cab – and visitors will be able to see for themselves how that’s actually done. The Bike Clip for chairlifts will also be available for testing. This allows bike attachment and removal with a few simple hand movements.

INTERALPIN: The flagship trade fair for alpine technologies

INTERALPIN is the leading international trade show for alpine technologies and a major meeting point for the industry. It brings together innovative solutions and the latest developments in the fields of ropeway technology in the alpine and urban environments, snow management, trail grooming, POS and access systems, safety, the leisure industry, and plenty more besides. Trade professionals from around the globe take advantage of INTERALPIN, which will run from Tuesday, May 6, through Friday, May 9, 2025, to exchange ideas, network and discover pioneering technologies that are revolutionizing alpine tourism and urban transportation.

City cable car solutions

The INTERALPIN Inspiration Days underpin INTERALPIN's leadership as an industry platform with an exciting supporting program of keynote speeches, panel discussions and presentations of current trends and developments. Under the heading "City Cable Car Solutions" on May 7, the focus will be on the use of ropeways for urban mobility. Ropeway systems are gaining importance as a sustainable and efficient addition to urban transport networks and urban mobility is facing groundbreaking changes.

Doppelmayr Group

The Doppelmayr Group represents quality, technology and market leadership in the construction of ropeway systems for passenger and material transport as well as high-tech intralogistics solutions. The company looks back on 130 years of corporate history and a century of experience in the planning, development, design, production, and construction of ropeways. This proven technology and the reliability it provides have helped to make ropeways a popular and high-performance mobility solution in skiing and recreation regions as well as in cities and at airports worldwide.
